Foothill to Offer Night Radio Class

3186
A special evening course in radio communication will be offered by Foothill College during the ~~spring~~ semester. Broadcasting 92A, Radio Production Laboratory, will offer two units of college credit and will meet on Monday and Wednesday evenings from 7 to 10, according to Dr. George Willey, instructor.

The course will include radio program production with training and experience in the techniques of announcing, recording, writing, producing, sound effects, engineering and station operation.

Students enrolling in this course will participate in radio programs for broadcast over the new college FM station, Willey said.

An application for the FM station is now pending with the Federal Communications Commission. It is hoped that the FM station will go on the air late in the spring, Willey said.

Willep served as educational director for KPIX-TV in San Francisco and as general manager for WBNB-FM Radio Station in Beloit, Wis. His Ph.D. was received at Stanford University, where he is now teaching radio and television.
